

ERAN  
INDUSTRIAL  
艾利工业

## Introduction

For over a decade, Eran Industrial has built a reputation on quality products, precise delivery, and comprehensive service in a diverse range of industries. We perpetually seek to improve our products and service to offer our customers the best possible experience.

At Eran Group, we are continuously redefining our synergies with our customers. From our start as a low-cost Chinese manufacturer, we have evolved into a fully vertical engineering, industrial manufacturing, supply-chain & financial service firm promoting technological and innovative solutions. From small businesses to Fortune 500 companies, our loyal customers can depend on us for a wide variety of business needs.

In 2009, we invested in a new state of the art aluminum pole facility to further broaden our industrial capabilities. During the last few years we've expanded and enhanced every aspect of our business based on our customers feedback and our understanding of the unique challenges they face. To help overcome these challenges, we've added new engineering and design resources, new manufacturing divisions, new product lines, and new supply-chain & financial services. For 2013, we aren't just redefining our business synergies; we're most importantly renewing our commitment towards our customers.

Our commitment goes far beyond manufacturing and supply; we position ourselves as a vertical business partner that helps tackle our customers' obstacles and actively assist them in their development and growth.

## ERAN INDUSTRIAL ACTIVITIES

## key Facts

65+ engineers, drawn from over four continents, with expertise in mechanical, material, solid state, electronic, and communication design and engineering

We've recently added 440,000 square feet of manufacturing facilities which brings our total manufacturing capacity over 800,000 square feet

Loyal Fortune 500, private, and publicly Traded customer Base

Seven North American distribution centers

Serving over 30 countries, in 4 continents, in over 8 languages

Providing real time supply chain services including vMI, consignment, and Finance programs

■ Shaded countries have conducted business with Eran Group

■ Indicates Eran Group office & manufacturing headquarters

★ Indicates Eran Group warehouse

ERAN  
INDUSTRIAL  
艾利工业

## At Eran industrial,

we are continuously striving to improve and optimize our manufacturing capabilities and the quality of our poles. In the past couple of years, we have emerged as one of the few prime Aluminum pole manufacturers in Asia,

with capabilities including: fluting, tapering and bending poles.

We handle the entire manufacturing process starting with raw aluminum, then construct, weld, treat, drill and the test our poles in our own facilities in Ningbo, China.

In addition, we manufacture a wide range of lighting systems that include **HID, CFL, Induction & LEDs** that complement our different poles models.

## Our design services and our pole-manufacturing stages are all performed in-house

by our international teams of experienced professionals.

This grants us a level of control over pole-manufacturing variables  
that enables us to reach the highest levels of quality.

## Our facilities include:

- T6 heat treatment oven • Thermoset painting line • Anodizing equipment
- Bending machines • Welding machine • Testing equipment.

CUSTOM  
DESIGNS  
&SOLUTIONS

# Our international Design team

can **customize pole profiles** and design matching luminaires to satisfy your most creative ideas.

Our teams can assist you throughout the entire creation process:

You come up with the product concept, and we do the rest.

# Supply Chain Services

## Logistical Work for Customer's Suppliers

- Logistical Work for Customer's Suppliers
- Provide logistical resources
- Consolidation from multi-suppliers
- Quality control assurance
- Freight insurance, US custom clearance

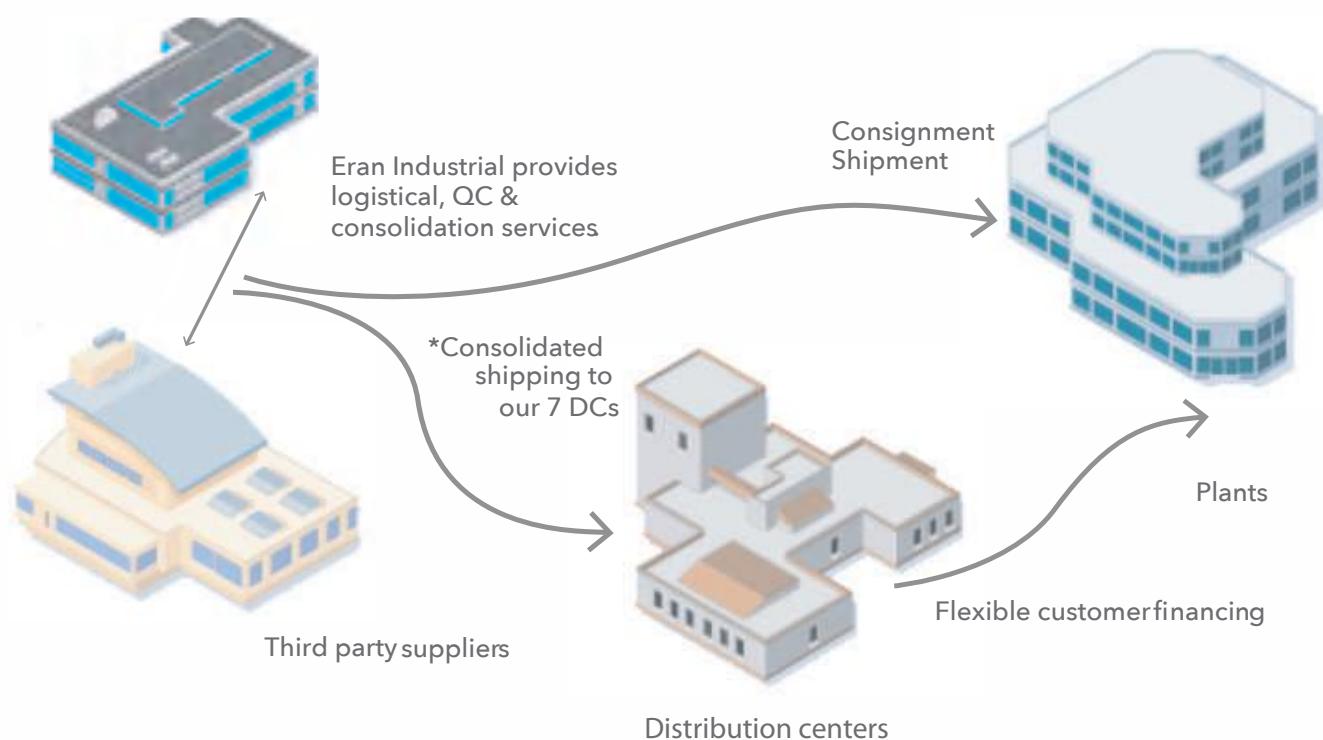

## Distribution & Inventory Solutions

- Consignment, JIT and VMI solutions
- 7 North American warehouses
- Able to establish warehouses near Customer facilities

## Inventory & A/R Financing

- Provide flexible inventory and A/R financing options for Customer

# WHY ALUMINUM?

Lighter,  
Rust Free ,  
Corrosion resistant,  
More Durable,  
Longer life  
Environment friendly  
100% recyclable

Safer in a collision  
Maintenance-free,  
Easier transportation and installation.  
Excellent for seaside, sandy and harsh  
environments

# WHY OUR POLES

Our aluminum poles offer an environmentally friendly alternative to steel and concrete poles. Additionally, they are easy to install, remove and recycle and offer more safety for drivers in case of a collision.

Eran industrial poles are extremely durable and come with a 20-year warranty. This means many years of safe and reliable performance.

## Customizable

Our range of aluminum poles is extremely diverse, our teams offer full custom profiles for our entire line-up. We offer tapering, fluting, bending, internal vibrating wind dampeners, Reinforced profiles, Ground level protectors and a wide range of brackets and accessories to satisfy all your needs.

## Quality

Our aluminum poles are rated for high velocity winds and designed for performance under the harshest conditions.

We offer a vast array of quality finishes such as anodizing and powder coating in addition to our T6 heat treatment.

Our welding is certified by the Canadian welding bureau. Our welding capabilities match the highest international standards.

## Customer Service

Our international sales team speaks more than 8 languages and is available 24 hours a day, to improve response time and provide you with the best possible service.

Eran Industrial is more than just a supplier; our level of service positions us as an ideal partner to assist you in your growth.

## Innovation

We are setting industry standards by being one of the few prime manufacturers in all of Asia capable of completing round tapered aluminum poles and round fluted tapered aluminum poles in house.

Our systems can be used with anchor bolts or direct buried, and offer a wide array of customizable options including base plates, mast arms, hand holes, and specialized accessories.

## POLE CONSTRUCTION

Our Aluminum poles are constructed from a seamless extruded tube of 6063 or 6061 aluminum alloy.

All our aluminum poles undergo T6 Heat Treatment to increase their strength.

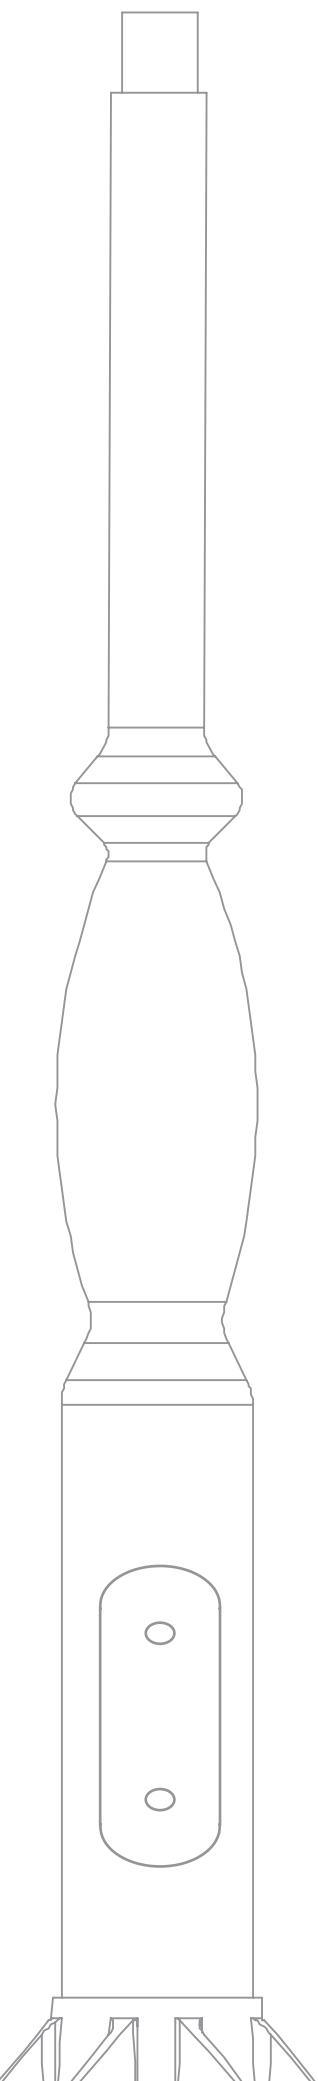

Optional internal vibrating wind dampeners are available for locations with high velocity winds.

Our aluminum poles can be mounted or directly buried given their outstanding corrosion resistance.

Our Aluminum Poles are  
crafted with quality welding  
expertise certified by the  
**Canadian Welding Bureau.**

Our welding capabilities match the  
highest international standards.

## POLEFINISHES

Other colors can be provided with RAL numbers or color chips upon request

## TESTING

Our in-house test facility provides us a means to test full-scale poles and brackets under static and cyclic load conditions.

Our poles undergo rigorous wind testing to ensure that they are wind resistant.

We also perform a 3000-hour salt corrosion test to ensure that our pole can withstand the harshest environmental conditions.

## WARRANTY

Our anodized aluminum poles and our satin-brushed poles carry a 20-year warranty.

Our powder painted aluminum poles carry a 5-year warranty for the paint from the date of shipment against cracking, peeling, excessive color change and fading due to normal climatic exposure and 20 year warranty for the aluminum shafts.

## Pole Applications:

### Industrial Applications

Our aluminum poles are extremely corrosion resistant and sturdy. They are strong enough to withstand harsh industrial conditions.

### Urban Lighting

Our wide range of pole brackets and finishes ensure that we can provide a lighting system suitable for any public area. From tear-drop to globe shaped lights, our selection is extensive enough to make any area stand out.

### Flagpoles

We can customize the height of our poles, so your flag can be flown at any height. Our decorative finials are suitable for display at formal venues or government offices.

## Road Lighting

Our poles can be matched with a vast array of lighting options to illuminate streets, highways, and parking lots. We have a broad range of reflectors ranging from Standard, Asymmetric, to Forward Throw. Match poles with our Induction Floodlights for a durable, energy friendly, low maintenance roadway lighting system.

## Residential and Decorative Lighting

We supply a wide range of decorative borosilicate lenses and acorn shaped lights with finials, perfect for providing elegant and modern lighting for your neighborhood. Once paired with our round tapered or round fluted aluminum poles, the range of styles is endless.

## Security and Traffic

Our poles are sturdy enough for the mounting of large road signs or security and traffic cameras. Our broad range of poles arm brackets endure our poles can be used to mount any sign and fit any avenue.

A photograph of a modern building's exterior. The building has a dark grey or black horizontal paneling on the left and a grey brick wall on the right. Large windows with black frames are set into both sections. In the foreground, there is a small, young tree in a rectangular planter made of weathered steel. The planter sits on a paved area with some low-lying plants and mulch. The overall aesthetic is clean and contemporary.

### Catalog Number Designates

Shaft Diameter At Base	Shaft Diameter At Top	Wall Thickness	Pole Height	Surface Finish	Accessory
50=5.0"	30=3.0"	B=0.125"	8'	BS=Brushed Satin	See Accessories Section

### Standard features include

1. Shaft 6063 Aluminum
2. Round tapered aluminum shaft, heat treated after tapering and welding to T6 temper
3. Tenon or drilling as required
4. Flush mounted, internally reinforced hand hold
5. Ground lug
6. Cast aluminum anchor base (Alloy 356T6) welded externally and internally to shaft
7. Removable spun aluminum top cap C/W stainless steel set screws

Available accessories, ordered separately

- Steel Anchor bolts with 3600 psi/5500 psi, hot Cast Aluminum nut cover
- Base cover

A nighttime photograph of a multi-lane roadway. The road has several white dashed lines marking its lanes. Along the right side of the road, there is a series of tall, thin poles, each topped with a bright, white, curved streetlight. The lights illuminate the road ahead, creating a sense of depth. In the background, there is a dark, possibly wooded area with some utility poles and wires. The overall scene is dark, with the primary light source being the streetlights.

Roadway  
poles

Twin Mast

For more information, contact us via website  
[www.erangroup.com](http://www.erangroup.com)

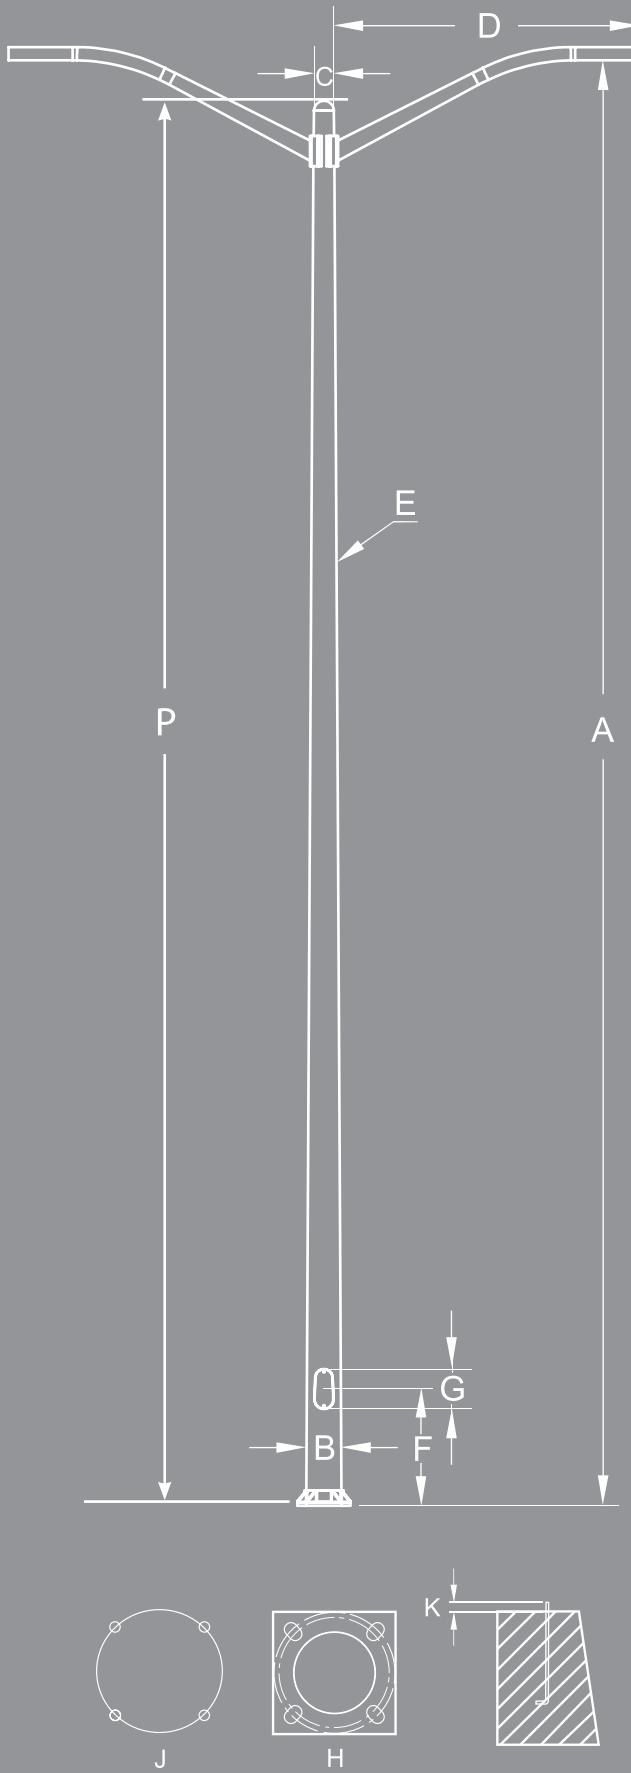

#### Standard features include

1. Shaft 6063 Aluminum
2. Round tapered aluminum shaft, heat treated after tapering and welding to T6 temper
3. Tenon or drilling as required
4. Flush mounted, internally reinforced hand hold
5. Ground lug
6. Cast aluminum anchor base (Alloy 356T6) welded externally and internally to shaft
7. Removable spun aluminum top cap C/W stainless steel set screws

Available accessories, ordered separately

- Steel Anchor bolts with 3600 psi/5500 psi, hot Cast Aluminum nut cover
- Base cover

Twin Davit

For more information, contact us via website  
[www.erangroup.com](http://www.erangroup.com)

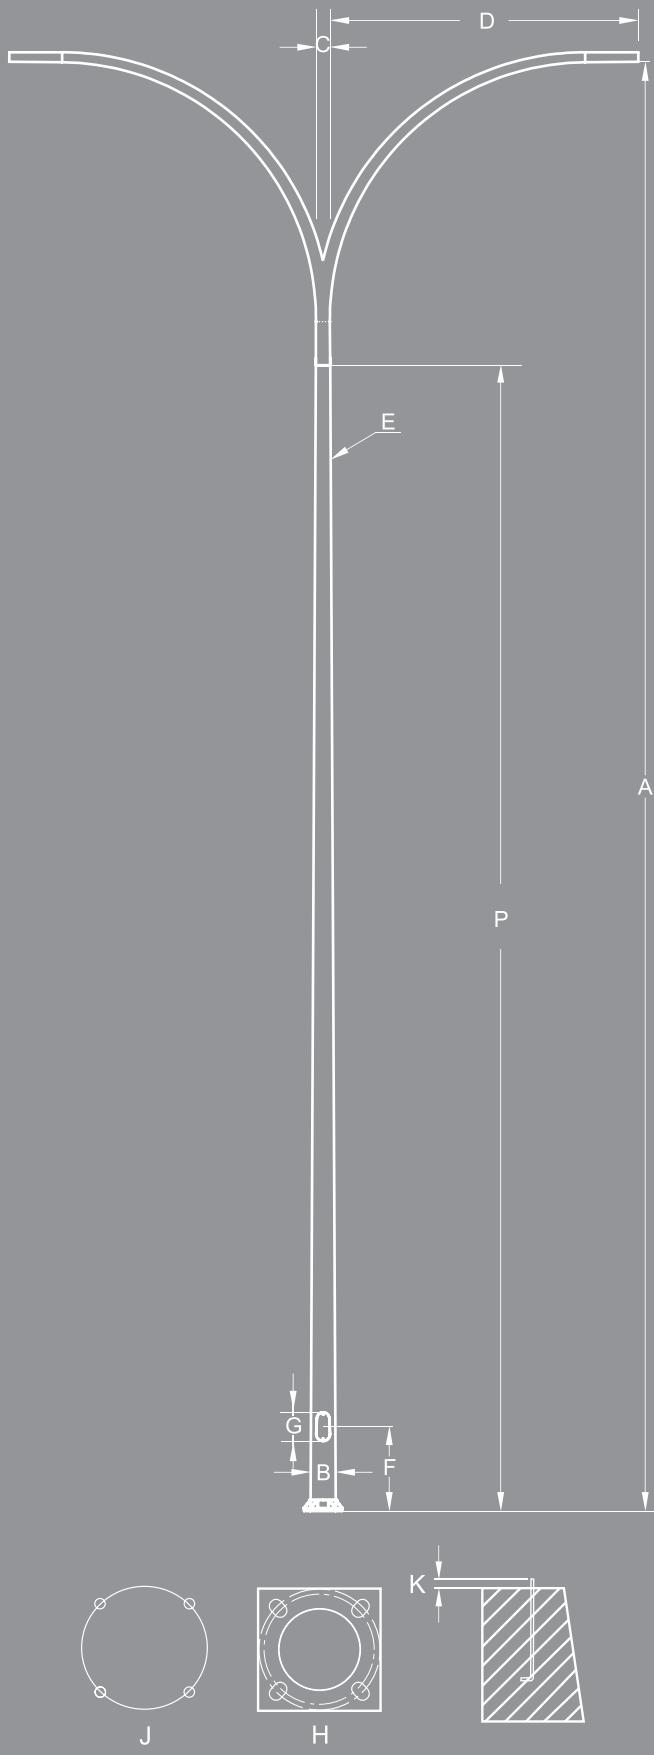

**Standard features include**

1. Shaft 6063 Aluminum
2. Round tapered aluminum shaft, heat treated after tapering and welding to T6 temper
3. Tenon or drilling as required
4. Flush mounted, internally reinforced hand hold
5. Ground lug
6. Cast aluminum anchor base (Alloy 356T6) welded externally and internally to shaft
7. Removable spun aluminum top cap C/W stainless steel set screws

Available accessories, ordered separately

- Steel Anchor bolts with 3600 psi/5500 psi, hot Cast Aluminum nut cover
- Base cover

Single pipe truss

For more information, contact us via website  
[www.erangroup.com](http://www.erangroup.com)

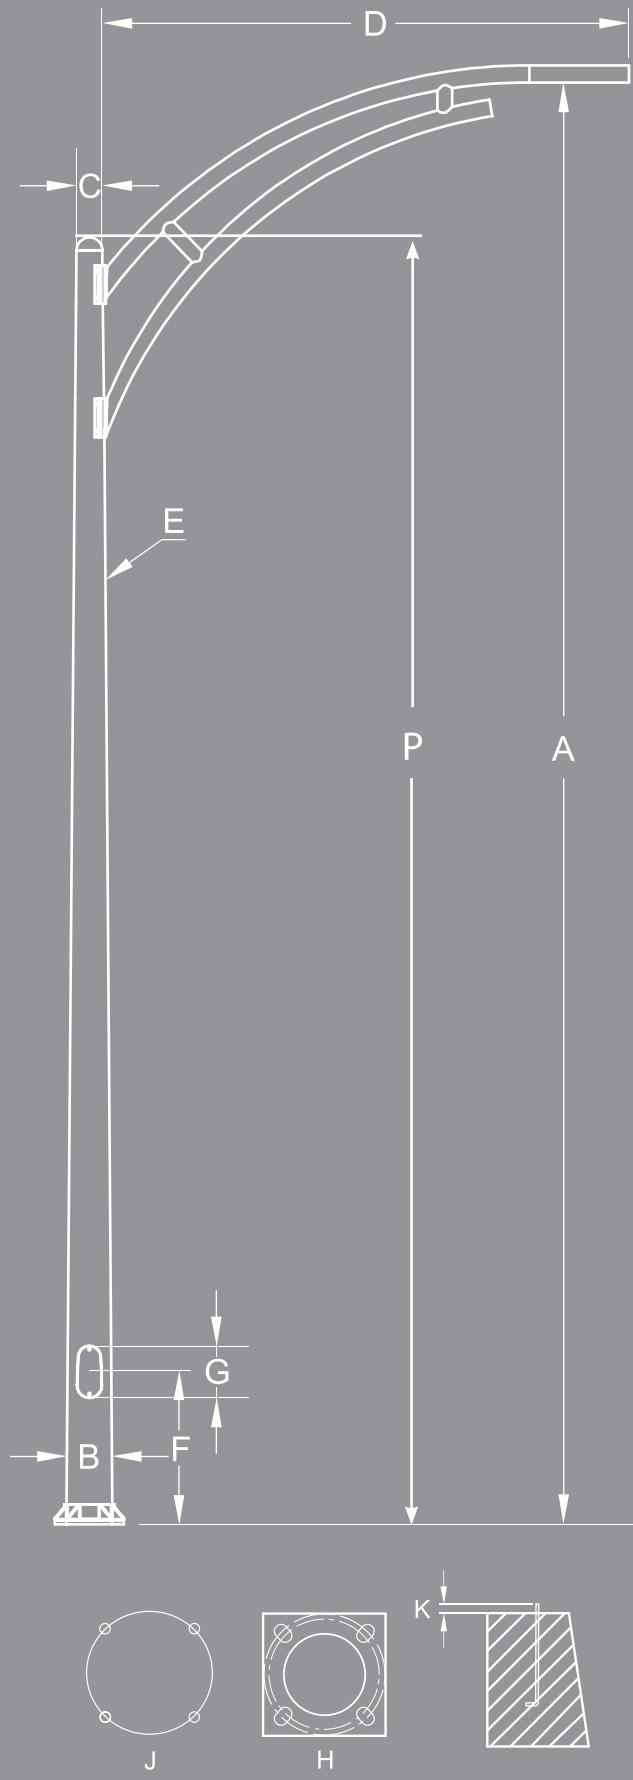

#### Standard features include

1. Shaft 6063 Aluminum
2. Round tapered aluminum shaft, heat treated after tapering and welding to T6 temper
3. Tenon or drilling as required
4. Flush mounted, internally reinforced hand hold
5. Ground lug
6. Cast aluminum anchor base (Alloy 356T6) welded externally and internally to shaft
7. Removable spun aluminum top cap C/W stainless steel set screws

Available accessories, ordered separately

- Steel Anchor bolts with 3600 psi/5500 psi, hot Cast Aluminum nut cover
- Base cover

Twin Tapered Mast

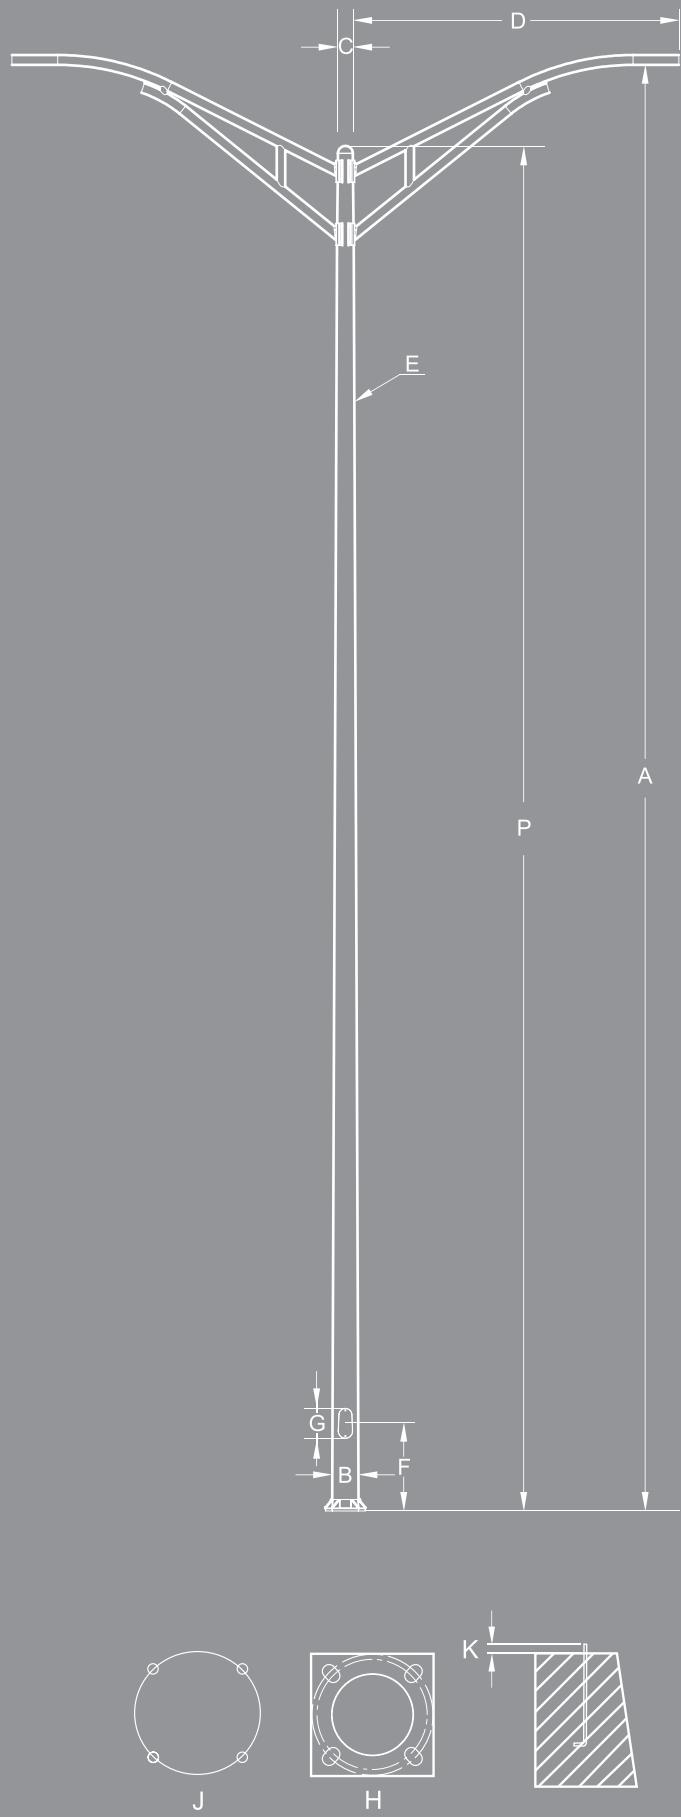

**Standard features include**

1. Shaft 6063 Aluminum
2. Round tapered aluminum shaft, heat treated after tapering and welding to T6 temper
3. Tenon or drilling as required
4. Flush mounted, internally reinforced hand hold
5. Ground lug
6. Cast aluminum anchor base (Alloy 356T6) welded externally and internally to shaft
7. Removable spun aluminum top cap C/W stainless steel set screws

Available accessories, ordered separately

- Steel Anchor bolts with 3600 psi/5500 psi, hot Cast Aluminum nut cover
- Base cover

## APPENDIX A

### Pole specifications

## Shaft

The shaft (round or square) shall be constructed of seamless extruded tube of 6063 or 6061 aluminum alloy per the requirements of ASTM B221 of sufficient nominal thickness to meet the design requirements without the use of internal reinforcing sleeve. No longitudinal shaft welds shall be allowed. The shaft shall be full-length heat-treated after welding to produce a T6 temper. The heat-treating oven used shall be certified to meet the requirements of ASTMB597 and Mil-H-6088 specifications. Pole shaft cap, when required, shall be cast aluminum of 443 or 356F aluminum alloy and attached utilizing stainless steel screws. Poles without transformer bases shall include a reinforced handhole centered 18" above the bottom of the shaft. Handholes are located 90 degrees clockwise from the plane of the bracket arm as viewed from the top. A cover with stainless steel attachment screws shall be provided for the handhole.

## Base Flange

The base flange for the attachment of the shaft to the foundation or to the transformer base shall be one piece cast socket of aluminum alloy 356 per ASTM B26 or B108. Base flange shall be joined to pole shaft by means of complete circumferential welds; externally at the top of flange and internally at bottom of shaft tube. Four anchor bolt covers of cast aluminum and stainless steel screws for their attachment shall be provided.

### Handhole (Round and Square Poles 6" to 10")

Handhole shall be 4" X 6", with the exception of 6" and 6 5/8" poles, which shall be 3" X 5". Handhole in round poles shall be reinforced with a cast frame of aluminum alloy 356 per ASTM B26 or B108. Handhole cover shall be aluminum and attached by means of two stainless steel screws.

### (Round and Square Poles 4" to 5")

Handhole shall be 2" X 4". Handhole cover shall be aluminum and attached by means of two stainless steel screws.

## Transformer Base

The breakaway transformer base, if required, shall be an aluminum casting (alloy 356-T6) with removable access door held in place with one stainless steel screw. The base shall be 17" tall with access door 11 3/4" high with a width of 9 1/4" at the top and 9 3/4" at the bottom. It shall connect to 1" diameter anchorage. Three bases with bolt circles ranging from 10" to 17 1/4" can be used with shafts in size from 6" to 10" diameter dependant on their proper application and specific loading restrictions. The base shall meet 2001 AASHTO breakaway requirements. Four 1" diameter long galvanized steel hex-head machine bolts with nuts and washer shall be supplied to attach the transformer bases to the base flange of the pole shaft. Eight 1/2" thick x 2 3/4" diameter galvanized steel heavy washers

shall be provided to properly distribute the bolt forces in the top and bottom flanges of the transformer base.

## Anchorage

Each anchor base pole shall be supplied with anchor bolts. Anchor bolts shall have minimum yield strength of 55,000 psi per AASHTO M314-90. Steel anchor bolts threaded and hot-dipped galvanized at the threaded end per ASTM A153 shall be supplied with each lighting pole. The bolts shall include a right angle hook at the unthreaded end. Each bolt shall include one nut, one flatwasher and one lockwasher galvanized per ASTM A153 shall be supplied with each anchor bolt.

## Direct buried poles

Direct buried poles shall have a 1 1/2" grommeted cable entry located 18" below grade, in line with the handhole. An anti-rotational device shall be provided by means of partial flattening the butt of the pole into an oval cross-section, if specified.

## Grounding

Each pole shaft shall contain an internal ground provision for the purpose of attaching a grounding connector. Grounding connector supplied by others or sold separately.

## Miscellaneous Hardware

All nuts, bolts, and washers used in the fabrication of the pole shall be Grade 18-8 stainless steel, except for anchorage hardware.

## Welding

Welding shall be done by inert gas shielded metal arc method with consumable electrode. Aluminum alloy 4043 electrode shall be used. Welding shall be in accordance with AWS Specification D1.2, Structural Welding Code Aluminum.

## Inspection And Packaging

Each coated part shall be inspected for appearance uniformity and mil thickness. Any part that does not meet the specified coating thickness shall be recoated. Coated product shall be spiral wrapped with cross woven textile, foam backed 5-mil polyethylene film or burlap material of sufficient tensile and elongation that exceeds requirement characteristics to ensure protection during handling and shipping. The product shall be bundled with sufficient dunnage and strapping to prevent damage during shipment.

## Surface Finish

The pole shaft shall be provided with a satin finish accomplished by mechanical rotary grinding, mechanically abrading or thermoset powder coat painted as required by the specifier. The mast, truss and floodlight crossarm bracket shall be provided with a satin etched finish by mechanically abrading. The davit bracket arms shall have the same finish as is on the shaft. All materials shall

be cleaned and free from dents and unsightly scratches.

## Surface Preparation

Pole shafts shall be satin ground, chemically etched, sanded or shot blasted to ensure proper powder coat surface adhesion. To ensure that the prepared parts are kept clean and not exposed to dirt, dust, grease or oil and to ensure maximum powder coat adhesion, the product shall proceed continuously and immediately to the powder coating process within the same facility where the poles and arms are manufactured.

## Powder Coating

Powder coating material shall be a thermosetting Polyester Powder Coating. A minimum coating thickness of 2.0 mils shall be maintained. Application of powder shall be electrostatically applied by a closed loop automated powder coating system featuring twelve automatic spray guns with computerized controls and positioners to assure mil thickness conformance. The powder coating system shall employ a powder recovery system utilizing closed loop quick-change technology to achieve efficient and contamination free color changes. The powder shall be applied only when both the ambient and part temperatures are 50 degrees F. or above. Once powder coated, the product shall proceed through a curing oven operating at 400 degrees F. that has been surveyed and certified for temperature uniformity. The product shall move continuously through the oven from beginning to end and shall attain the time at temperature in accordance with the paint manufacturer's recommendations. Once oven cured, the product shall move immediately to and continuously through a forced air-cooling tunnel designed to restore the product to acceptable packaging temperature prior to inspection and packaging. Upon exiting the cooling tunnel the product shall be immediately inspected and packaged.

## Guaranteed color uniformity

Our standard thermoset powder coating is a minimum 2.0 mils of triglycidyl isocyanurate (TGIC) polyester thermoset powders. The National Association of Architectural Metal Manufacturers, Metal Finishes Manual, rates the outdoor life of these powders as 15 plus years.

**NOTICE:** Anodizing inherently results in color variations on aluminum where there are chemical or physical differences in the materials. Extreme color variation occurs between the tube (Alloy 6063-T6), castings (Alloy 356) and weld metal (Alloy 4043). These color variations in anodized finishes are unavoidable and not covered under Eran warranty.

## Testing

Eran has an in-house test facility providing a means to test full-scale poles and brackets under static and cyclic load conditions. Thousands of tests have been conducted in the interest of product improvement. These tests, along with wind testing that is conducted in wind tunnels, provide the basis for Eran Industrial's present design criteria.

## Wind Forces

Wind tunnel testing is one of the most reliable methods of determining wind forces for use in designing structures exposed to natural winds. Eran has conducted wind tunnel tests on luminaires, traffic signals and sections of various round and elliptical tubes. Wind tunnel test data is also available on other objects of similar shape to lighting equipment. This data is used whenever possible in calculating wind loads on Eran structures. EPA ratings of luminaires are based on wind tunnel test data.

## Other Forces

The stresses caused by the weight of the luminaires (and of the bracket arm) exist continuously throughout the life of the installation and are subject to fluctuation caused by the aerodynamics of the luminaire or other characteristics

of the assembly. Therefore, these stresses must be limited to a conservative value to eliminate the possibility of fatigue.

Other vertical loads are the effects of ice and other intermittent loads. Generally, these are of relatively little significance (except when applied to overhead wiring).

All Eran poles will also withstand the forces produced by a ladder leaning against the assembly, although such factors as the degree of impact and the positioning of the ladder should be considered.

Overhead wiring must be treated as a special loading challenge. The forces anticipated in a particular installation must be known in order to select the correct pole. Generally, standard poles can be used for tangent applications. The selection of dead-end and corner poles will usually be based on the deflections caused by the anticipated forces.

**Wind Velocity Selection** A mean recurrence isotach 50 year wind map produced by the Environmental Data Service (National Oceanic and Atmospheric Administration, U.S. Department of Commerce) is included in this catalog. This wind map should be used to determine wind velocity for your specific location. If you are located between two different velocity Isotach lines, the higher velocity should be used.

A gust factor of 1.3 is applied to the isotach wind velocity to account for gusts in calculating design wind forces. For example, 104 mph gust velocity is used to calculate wind forces for 80 mph Isotach.

Eran has learned from years of experience that there are local isolated high wind conditions that can be devastating to poles and luminaries not designed for such conditions. Additionally, constant winds in the 10-25 mph range can severely damage certain poles and luminaries by vibration. Vibration is a local, site-specific condition that may be overlooked when selecting a pole. Destructive vibration is NOT an indication of substandard material, workmanship, or pole design. Please advise Eran of any unusual wind conditions prior to purchase of poles. Heavier poles and/or vibration dampers may be necessary to avoid wind damage.

Pole failures as a result of wind-induced vibration are NOT covered under manufacturers warranty, unless Eran vibration dampers are installed.

## Methods Of Analysis Allowable Values

Many pole designs permit a simple analysis of the combined bending stresses caused by the various types of loads. Each type of joint configuration is evaluated by the structural engineer to determine the stress that is permissible, and the recommended loads are limited to stay within that allowable stress value. For example, higher allowable stresses are permitted for a joint of the socket type than for a joint comprised of a tube welded to a flat plate. There are many types of joint configurations, a variety of materials, unusual characteristics of specific styles of poles, etc., each of which requires the judgment of the design engineer. It is not possible to include all of these in this discussion.

Stresses caused by dead weight alone are limited to very low values for the reasons indicated in the discussion under

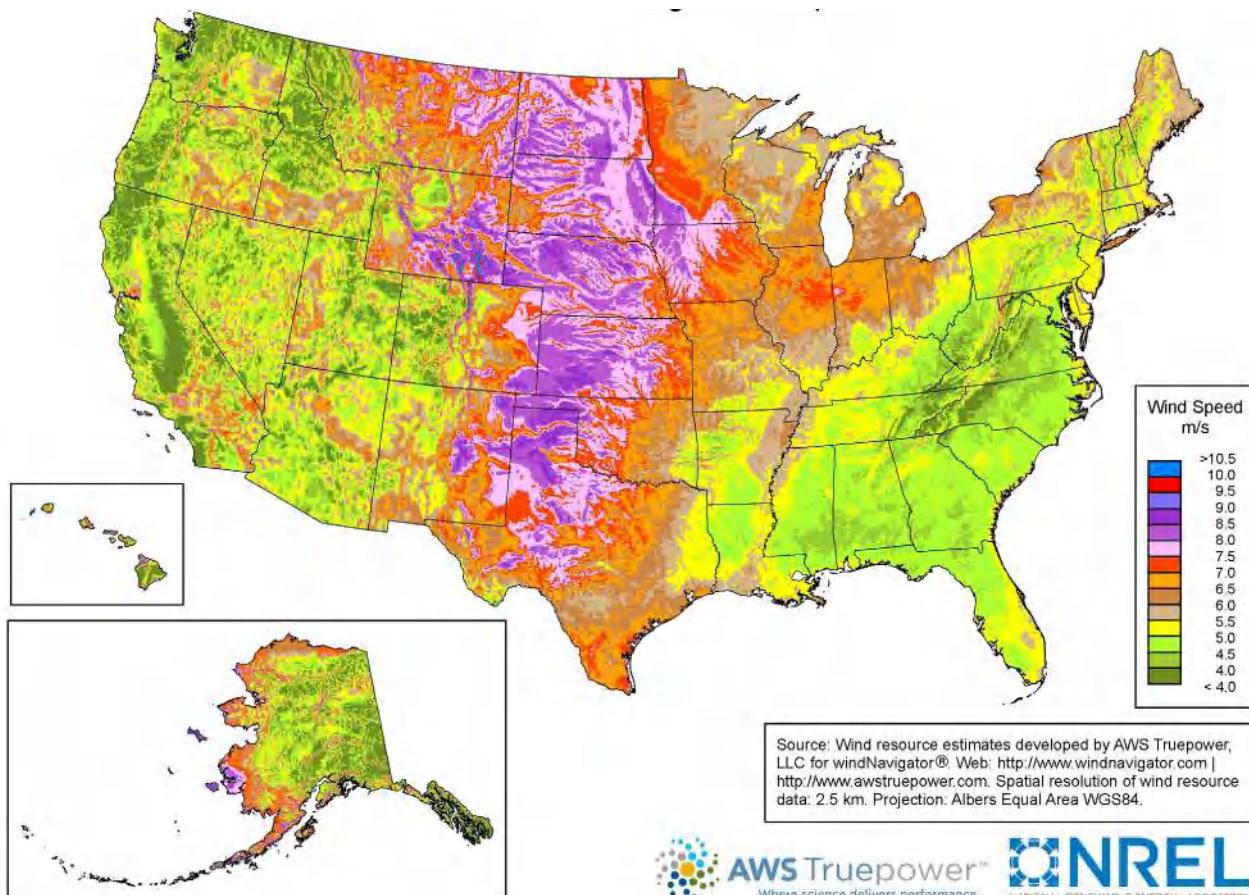

**"OTHER FORCES."** In evaluating the effect of the maximum anticipated wind velocities, higher stresses may be permitted since the high velocity winds are only expected to occur a few times during the life of the installation.

## Stiffness

## considerations

are included in the analysis of a Eran pole. For example, the effect of the weight of the arm and luminaire in causing the bending of the pole shaft in a single arm application is evaluated. The deflection of the shaft

## United States - Annual Average wind Speed at 80 M

is limited to provide an attractive appearance under this condition of load. The allowable deflection is based on the angular deflection or rotation of the shaft top (which is the characteristic that is the best measure of appearance under this type of load condition) rather than linear displacement of the top or "radius of curvature" which are used by some manufacturers.

Poles in this catalog are designed to meet the strength requirements of AASHTO. Please advise Eran of any additional requirements you have.

### Eran Warranty

Seller warrants to repair or replace, at seller's option, any equipment, which fails due to defects in material or workmanship within one year from date of shipment, unless failure is due to improper installation or misapplication. This guarantee is limited to the repair or replacement of the material involved and does not include reimbursement for the expense of installation, removal of equipment, transportation, or any other expenses which may be incurred. Authorization must be obtained from Eran Industries at Delray Beach, FL, before any material is returned.

#### Note

These specifications are only intended for general information. In a continuing effort to improve our products, Eran Company reserves the right to change materials and designs without prior notice.
